

PTA AL 30 -40

Installation Instructions.

Thank you for choosing **Subsea Sports'** Pony Tank Adapter system for your next dive adventure. The design is rugged and simple to use and we hope you find these instructions helpful in getting wet sooner!

As noted in the product description, dual tank straps are required to secure the TWO included mounts.

Mount one bracket at the top of the AL30/40 tank. The clamps are a close fit so please take your time. Make sure the the clamp straps are straight and square relative to the tank.

Measure the distance from the top strap of your BCD to the bottom strap.

Use this measurement to place the second mount on the lower end of your AL30/40. Once you have fitted it semi snug, lay the pony tank down and orient the valve handle up (or at whatever angle you prefer) and double check your measurements and squareness relative to your tank. Once satisfied with placement, tighten all four clamps.

Loosen your tank straps and then slide the top hanging legs of the bracket behind the top tank strap. Repeat repeat for the bottom tank strap.

Secure the top tank strap, then the bottom one. Check to make sure the both sets of bracket legs are held securely.

It may take one or two more adjustments to get the pony tank to sit where YOU want it.

We do recommend removing the PTA system periodically to clean the tank.
